

Kodak Versamark Color Proofer

Cost-effective solution

You can now enhance your **Kodak Versamark** Printer and deliver a more cost-effective solution for your customers with our **Kodak Versamark Color Proofer**. The **Versamark Color Proofer** provides accurate color proofs from your monitor or output color-correct proofs from the **Hewlett-Packard Photosmart** Printer, which is part of the total proofer package.

View accurate color proofs

Prior to this capability, your only way to view application output was to print the job on press. Now, using your own document, the **Kodak Versamark Color Proofer** provides the ability to RIP and print your data on a proofing substrate to gauge how the print run will appear. You can also view an exact proof of the document, capturing print dot structure and the

simulated paper brightness - without going to press.

You now have an accurate print proof that allows you the opportunity to adjust the print specifications before going to press, no matter which system controller you use. This can help eliminate printer downtime and improve employee productivity.

Kodak Versamark Color Proofer specifications

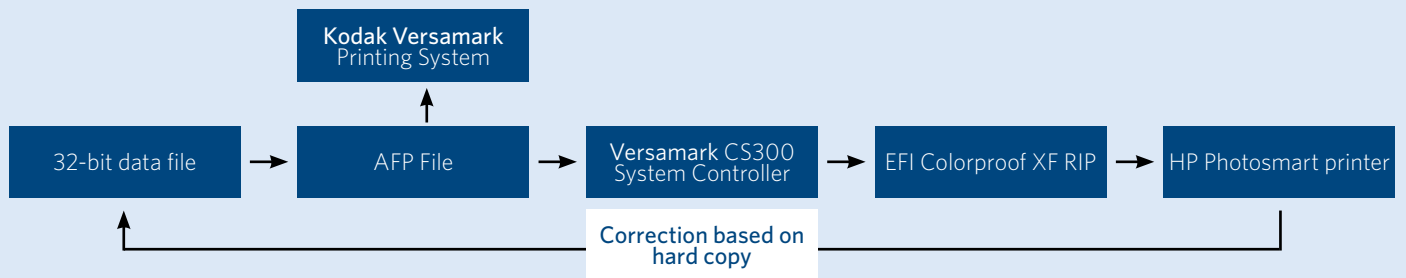

Hardware components

- DELL PC - **Windows** XP Pro OS
- **NEC** MultiSync LCD monitor
- X-Rite Eye-One spectrophotometer
- X-Rite iO automated scanning table
